- III. [Approved Standard\(s\)](#)
- IV. [Approved Product\(s\)](#)
- V. [Justification](#)
- VI. [Technical and Implementation Considerations](#)
- VII. [Emerging Trends and Architectural Directions](#)
- VIII. [Review Cycle](#)
- IX. [Time Line](#)
- X. [Revision History](#)

I. DEFINITION

Metatags – Metatags serve an indexing function for the discovery and retrieval of web pages. Metatags are embedded in the HTML source code of a web page, making them searchable by search engines. Although hidden from the user, metatags describe the informational content of the web page and are useful for many background tasks relating to information management.

II. RATIONALE

Metatags help citizens find specific pieces of information by improving the search capabilities of the State's search engine. By using a common standard, State agencies can more easily reach their intended audiences, and citizens will have a better experience in using the State's web pages and finding the information they need. Use of metatags will allow the State's search engine to work to its full potential.

III. APPROVED STANDARD(S)

NISO/ANSI Standard 39.85, also known as "Dublin Core," is hereby adopted as the metatag standard for Idaho State government web pages. This standard consists of the following elements. Exact syntax, definitions, and usage guidelines will be developed as supporting documentation. Elements marked with an asterisk (*) are recommended as minimum-level metatags, while others may be used as appropriate.

1. Title; *
2. Publisher; *

3. Creator or author; *
4. Description; *
5. Subject; *
6. Date created; *
7. Date last modified; *
8. Format; *
9. Language; *
10. Identifier;
11. Rights;
12. Type;
13. Contributor;
14. Coverage;
15. Relation; and
16. Source.

The Dublin Core is specifically designed for indexing web pages. It is used in hundreds of implementations worldwide, in both government and non-government settings, and has been translated into twenty (20) languages. The National Information Standards Organization and the American National Standards Institute have approved it. More information on the Dublin Core is available on the Internet at <http://dublincore.org>.

IV. APPROVED PRODUCT(S)

Software products to aid in the generation of the metatags are under review by the ITRMC Metatag Task Force at this time.

V. JUSTIFICATION

Products to aid in the generation of metatags will make it easier to apply metatags and encourage faster adoption of the standard.

VI. TECHNICAL AND IMPLEMENTATION CONSIDERATIONS

When metatags are in place, the State search software will be re-programmed to give more weight to metatags. This will allow the search engine to work to its full potential and deliver better search results.

The standard will be implemented on a voluntary basis, at the discretion of each agency. Webmasters, web development staff, and web authors are likely to be the primary implementers, with training and support provided by the Idaho Commission for Libraries, the State Webmaster, ITRMC staff, and Access Idaho staff.

Adoption of the standard will be promoted through a variety of strategies, including education, training, and software tools, that make it easier to apply metatags. Early adopters are expected to see immediate benefits in reaching their intended audiences, and this will encourage adoption by other agencies.

VII. EMERGING TRENDS AND ARCHITECTURAL DIRECTIONS

Metatag standards are evolving at both the national and international levels. The Metatag Task Force will monitor developments and may build on the metatag standard as new information becomes available. Of special interest is a recently released draft of a *Government Application Profile for Dublin Core*.

Metatags for web pages should ideally be seen as one component of a comprehensive records management system. Standards and best practices for electronic records management are emerging and will be considered by the State Records Management Task Force, whose work will be coordinated with the work of the Metatag Task Force.

Resources for implementation and training are under review at this time and will be incorporated into this standard as they become available.

VIII. REVIEW CYCLE

Twelve (12) months

IX. TIME LINE

Last Reviewed: March 7, 2007
Last Revised: March 7, 2007
Effective Date: December 7, 2001

X. REVISION HISTORY

3/7/07 – Review cycle adjusted to 12 months

9/13/06 – Section VI, Technical and Implementation Considerations, updated to reflect an agency name change.
